21) When implementing linear regression of some dependent variable y on the set of independent variables $\mathbf{x} = (x_1, \ldots, x_r)$, where r is the number of predictors, which of the following statements will be true?

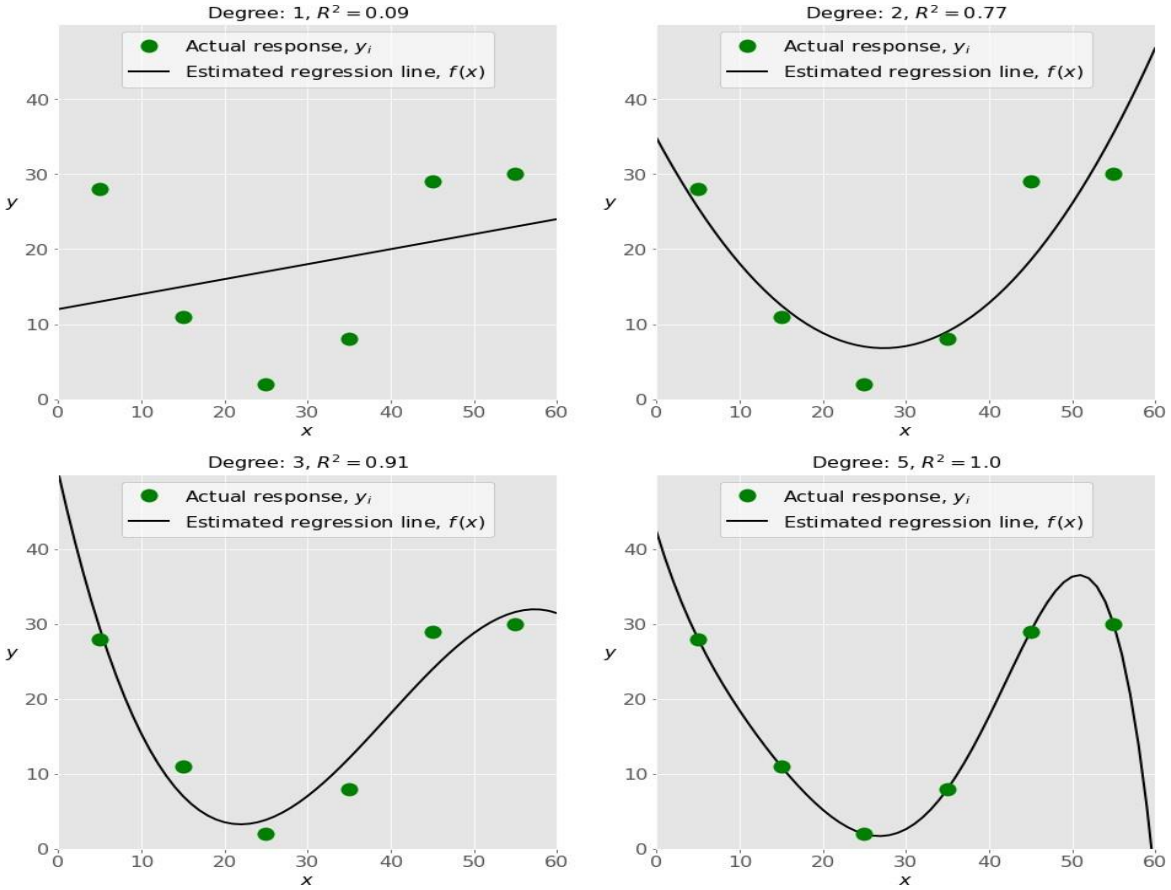
Both a and b

22) What indicates that you have a **perfect fit** in linear regression?
The value $R^2 > 0$, which corresponds to SSR = 1

23) In simple linear regression, the value of **what** shows the point where the estimated regression line crosses the y axis?

B0

24) Check out these four linear regression plots:



Which one represents an **underfitted** model?

The bottom-left plot

25) There are five basic steps when you're implementing linear regression:

- **a.** Check the results of model fitting to know whether the model is satisfactory.
- **b.** Provide data to work with, and eventually do appropriate transformations.
- **c.** Apply the model for predictions.
- **d.** Import the packages and classes that you need.
- **e.** Create a regression model and fit it with existing data.

However, those steps are currently listed in the wrong order. What's the correct order?

e, d, b, a, c

26) Which of the following are optional parameters to LinearRegression in scikit-learn?

Fit

27) While working with scikit-learn, in which type of regression do you need to transform the array of inputs to include nonlinear terms such as x^2?

Polynomial regression

28) You should choose statsmodels over scikit-learn when:

You're working with nonlinear terms.

29) _____is a fundamental package for scientific computing with Python. It offers comprehensive mathematical functions, random number generators, linear algebra routines, Fourier transforms, and more. It provides a high-level syntax that makes it accessible and productive.

Numpy

30)_____is a Python data visualization library based on Matplotlib. It provides a high-level interface for drawing attractive and informative statistical graphics that allow you to explore and understand your data. It integrates closely with pandas data structures.

Seaborn
